SOFTWARE ENGINEER

Guillermo Cardona Gómez

Building reliable interfaces. Taking ownership beyond the UI.

I build and maintain enterprise applications with Angular, React, and TypeScript, taking features from requirements and technical design through integration, testing, debugging, and delivery.

Frontend depth, technical ownership, and a growing backend foundation.

01

About me

I am a software engineer with experience building enterprise applications and collaborating across teams to deliver maintainable solutions.

My work at Teradata includes ownership of OPF and Consumption/Usage, frontend development, API integration, automated testing, and troubleshooting across application and infrastructure boundaries.

I care about understanding the problem, making technical decisions explicit, and keeping software understandable for the people who maintain it.

I am deepening my Angular, React, and TypeScript expertise while expanding my backend and system design skills.

Own the outcome

Follow a feature from requirements to delivery, including integration issues and cross-team coordination.

Build for maintenance

Prefer clear responsibilities, reusable components, and tests that protect meaningful behavior.

Investigate across boundaries

Trace issues beyond the interface when APIs, authentication, or deployment environments affect the user experience.

02 Professional experience

Enterprise development, feature ownership, and collaborative delivery.

Sep 2024 — Present **Teradata**

Software Engineer - User Interface Engineer

Own feature development across OPF, Consumption/Usage, and Connection Manager, including an ongoing Angular-to-React migration, while contributing to enterprise applications across Console, AIS, and Notebooks.

> I lead the Consumption/Usage migration from Angular to a React remote within the existing monorepo, maintaining both implementations while continuing feature development and UX alignment.

Responsibilities and contributions

- Lead the technical direction and implementation of the Consumption/Usage migration from Angular to React, integrating React as a remote within the existing monorepo while maintaining both implementations in parallel.
- Own new feature development across OPF and Consumption/Usage, aligning existing interfaces and new functionality with UX designs and established design principles.
- Took end-to-end ownership of Connection Manager during a team transition, becoming a primary technical point of contact and coordinating implementation, technical decisions, and issue resolution across teams.
- Own features from requirements analysis and technical design through API integration, implementation, automated testing, cloud validation, debugging, and delivery.

- Build maintainable enterprise interfaces with Angular, React, TypeScript, RxJS, Nx, Signals, reusable components, dependency injection, and Jest-based unit testing.
- Investigate integration issues involving frontend applications, backend APIs, authentication flows, Kubernetes workloads, and remote cloud environments.
- Coordinate with other engineering teams when problems cross application or service boundaries.
- Use AI-assisted workflows to support code analysis, debugging, and repetitive engineering tasks.

Angular | React | TypeScript | RxJS | Nx | Angular Signals | Jest

---

Sep 2023 — Sep 2024 **Teradata**

User Interface Engineering Intern

Contributed to production enterprise UI applications before transitioning into a full-time software engineering role.

Responsibilities and contributions

- Developed practical experience with Angular, TypeScript, testing, API integration, and large-scale development practices.
- Worked within collaborative development, code review, and Agile delivery processes.

Angular | TypeScript

May 2023 — May 2024 **Axolote Web Team**

Full Stack Developer & Designer

Collaborated on a responsive web application for a fragrance business.

Responsibilities and contributions

- Built and delivered a client web application as part of a freelance development team.
- Contributed to UI/UX design, frontend development, backend functionality, and implementation of client requirements.

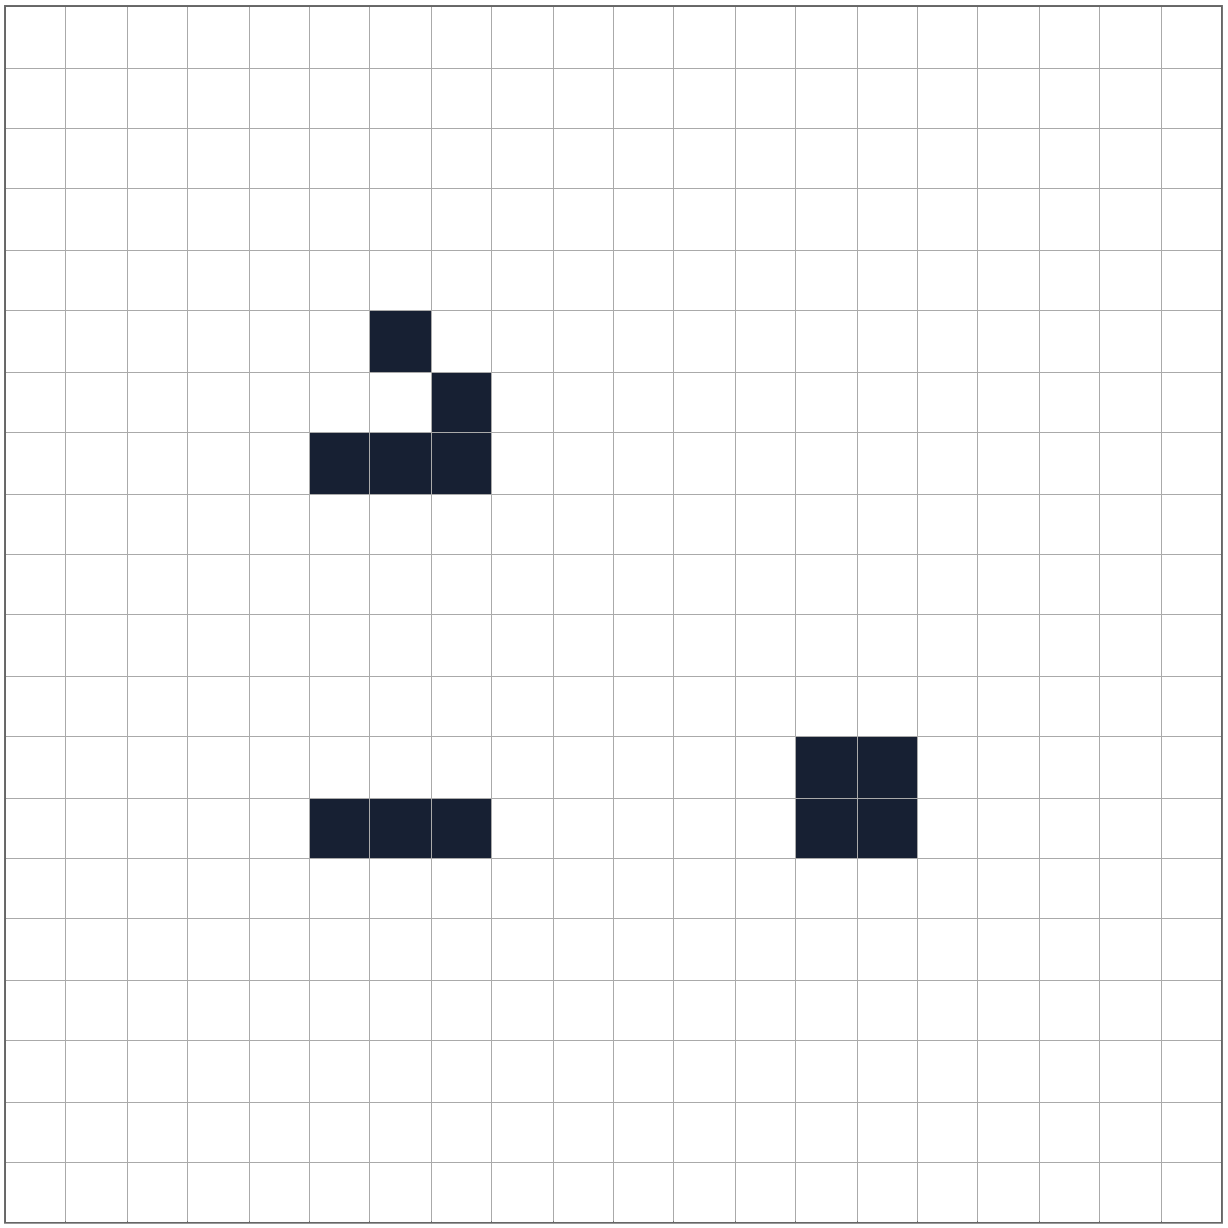

03

Frontend Lab

Small, focused demos that make interface behavior and engineering decisions visible.

04

Technical skills

A focused view of my current experience and the areas I am developing next.

Core professional experience

Angular, React, TypeScript, RxJS, Nx, reusable components, API integration, frontend migration, and Jest-based testing.

Angular | React | TypeScript | RxJS | Nx | Angular Signals | Jest | REST APIs

Additional experience

A broader toolkit spanning frontend frameworks, backend development, databases, and development environments.

Programming languages

JavaScript | Python | SQL

Frontend

Next.js | HTML | CSS | Angular Material | Material UI | Tailwind CSS

Backend and APIs

Node.js | Express | Django | Flask

Databases

PostgreSQL | MySQL | MongoDB

Infrastructure and environments

Docker | Kubernetes | Linux | Bash

Testing and engineering practices

Git | CI/CD | Agile | Scrum | Kanban | Jira | Data Structures & Algorithms

Next learning goals

Planned learning projects in Python with FastAPI and PostgreSQL, followed by deeper work in Go, cloud, and distributed systems.

FastAPI | PostgreSQL | Go | Cloud | Distributed Systems

05

Education and languages

Computing Systems Engineering

Escuela Superior de Cómputo

Instituto Politécnico Nacional

Academic studies completed in January 2025.
